

Einstein's Student Claimed US Govt. Re-Engineered UFO & Studied Alien Bodies

By [Vicky Verma](#) · 6 days ago

On September 15, 1950, a remarkable interview took place in Washington, D.C., but it remained classified until the early 1980s, when Canadian UFO researcher Arthur Bray discovered a memo written by Canadian engineer [Wilbert B. Smith](#) that discussed an alleged UFO crash rumor confirmed by a former student of Einstein, Dr. Robert Irving Sarbacher.

Dr. Sarbacher (1907-1986) was a preeminent scientist. He went to Harvard and was Dean of the Graduate School, Director of Research at Wedd Laboratories, a successful inventor, and a Scientific Consultant to the U.S. Marines and government agencies. He was also connected to the Joint Research and Development Board (JRDB) of the US Department of Defense. He did a lot of research on rockets that could be controlled from a distance. Later, he would start the Washington Institute of Technology. ([Source](#))

In the 1980s, Dr. Sarbacher confirmed several facts about UFOs and ET to researchers William Steinman, Stan Freidman, Jerry Clark, and William Moore. He said that he had been officially told about the crash of an extraterrestrial craft in the Southwest in the early 1950s. This crash may have been the Roswell UFO crash, or it may have happened at a different time. ([Source](#))

He confirmed to them (as well as to Wilbert Smith three decades before) that the issue was classified as more important than the development of the Atom Bomb. According to him, the debris was both incredibly light and highly durable. He understood that the aliens were lightweight and constructed somewhat like insects. He stated that a limited group of individuals, including Von Braun, Vannevar Bush, Oppenheimer, and Eric Walker, were likely involved in the crash debris analysis. They were unsuccessful in their attempts to reverse-engineer the technology.

Back in 1983, William Steinman, the author of the book "UFO crash: Aztec, New Mexico, March 1948," wanted to talk to Sarbacher about UFOs and dead aliens. He tried to get in touch with him and start a conversation. Steinman received a reply from Sarbacher in an amazing way. Sarbacher wrote him the following in a letter: ([Source](#))

“Dear Mr. Steinman: I am sorry I have taken so long in answering your letters. However, I have moved my office and have had to make a number of extended trips. To answer your last question in your letter of October 14, 1983, there is no particular reason I feel I shouldn't or couldn't answer any and all of your questions. I am delighted to answer all of them to the best of my ability. You listed some of your questions in your letter of September 12th. I will attempt to answer them as you had listed them.

1. Relating to my own experience regarding recovered flying saucers, I had no association with any of the people involved in the recovery and have no knowledge regarding the dates of the recoveries. If I had I would send it to you. 2. Regarding verification that persons you list were involved, I can say only this: John von Neuman was definitely involved. Dr. Vannevar Bush was definitely involved, and I think Dr. Robert Oppenheimer also.

My association with the Research and Development Board under Doctor Compton during the Eisenhower administration was rather limited. o although I had been invited to participate in several discussions associated with the reported recoveries, I could not personally attend the meetings. I am sure that they would have asked Dr. von Braun, and the others that you listed were probably asked and may or may not have attended. This is all I know for sure.

3. I did receive some official reports when I was in my office at the Pentagon but all of these were left there as at the time we were never supposed to take them out of the office. 4. I do not recall receiving any photographs such as your request so I am not in a position to answer. 5. I have to make the same reply as on No. 4.

I recall the interview with Dr. Brenner of the Canadian Embassy. I think the answers I gave him were the ones you listed. Naturally, I was more familiar with the subject matter under discussion, at that time. Actually, I would have been able to give more specific answers had I attended the meetings concerning the subject. You must understand that I took this assignment as a private contribution. We were called "dollar-a-year men. My first responsibility was the maintenance of my own business activity so that my participation was limited.

About the only thing I remember at this time is that certain materials reported to have come from flying saucer crashes were extremely light and very tough. I am sure our laboratories analyzed them very carefully.

There were reports that instruments or people operating these machines were also of very light weight, sufficient to withstand the tremendous deceleration and acceleration associated with their machinery. I remember in talking with some of the people at the office that I got the impression these "aliens" were constructed like certain insects we have observed on earth, wherein because of the low mass the inertial forces involved in operation of these instruments would be quite low.

I still do not know why the high order of classification has been given and why the denial of the existence of these devices. I am sorry it has taken me so long to reply but I suggest you get in touch with the others who may be directly involved in this program.”

According to UFO researcher Anthony Braglia, researcher D.M. Duncan located Sarbacher's son, Robert Sarbacher Jr., living in Texas. Duncan had a revealing dialogue with Sarbacher. It turned out that the younger Sarbacher had once questioned his father about the UFO phenomena. His father spoke sparingly about the saucer subject. ([Source](#))

Sarbacher Jr. said of his father: "He knew that they were real for the obvious reason that they would be going 600 mph and then make a direct 90-degree turn in mid-air without slowing down... separated from all inertia and gravity. Dad said that the reason he was called in was to build the right kind of missile to track these things since they were way too fast for any of our planes to catch. They wanted the missile to not destroy any of the UFOs, but to be able to track them. So Dad had cameras installed (like on the V-2 rockets) so when the UFO comes into our air space we would shoot missiles at them with cameras on them, since only a missile could keep up with the speed turns."

Stunned at the revelation, Duncan wanted to clarify this, and Sarbacher's son replied, "Yes, exactly to track UFOs, or rather to photograph and watch them... When he first told me about the missiles... the first thing I thought was, what? You were trying to destroy them? He (Sarbacher Sr.) said very normally and matter of factly, 'No, we put cameras on the end of them.'"

Sarbacher never changed his story, and he resisted the urge to expound or make assumptions. Everyone who spoke with him was impressed. However, his statement could not be corroborated because all of the people he mentioned had passed away. It was the summer of 1986 when Sarbacher passed away.
